

Revised: Fall 2016

GEO 220

World Regional Geography

COURSE OUTLINE

Prerequisites: None

Course Description:

Studies physical and cultural characteristics of selected geographical regions of the world. Focuses upon significant problems within each of the regions, and examines the geographical background of those problems. Introduces the student to types and uses of maps.

This course provides an introduction to the diverse academic discipline of geography, through the physical, environmental, demographic, political, and economic landscape. It uses geographic/spatial methods to assess the dominant geographic aspects of the world, events, and issues. It further examines traditional geographic concepts, ideas, and terms, while broadening the students' worldview through highlighting physical and human diversity involved in the study of the planet. Analyzes the major world realms and introduces the student to the concept of region. Moreover, it provides an outlet for discussion and critical analysis of the changing world, such as the major new issues of globalization and environmental geography. Interpret maps and understand basic map fundamentals.

Students will strengthen skills in interdisciplinary studies and global awareness.

This course is generally an elective.

Semester Credits: 3 Lecture Hours: 3

GEO 220: World Regional Geography

Course Outcomes:

At the completion of this course, the student should be able to:

- Identify the location of world realms and major states on a map or globe.
- Critically consider the geographic issues of each realm and region through arguing a position for or against a current issue.
- Use and define geographic terms such as nation, State, development, site and situation, carrying capacity, assimilation, centripetal and centrifugal forces, desertification, fair trade, ethnic cleansing, hearths, NAFTA, supranational organizations, border, globalization, megalopolis, primate city, and less-developed country to name a few.
- Interpret thematic maps of regional issues such as ethnicity, language, economies, populations, political boundaries, landscapes, and tourism.
- Select specific regional issues for analysis and critical argument.
- Understand basic history of the world's realms and regions.
- Trace changes on the landscape (historical geography).
- Understand both a global and local view of space and place.
- Compare and contrast world regions based on geographic concepts including physical, economic, political, demographic, and environmental perspectives.
