Virginia Western Community College BIO 101 General Biology I

Prerequisites

MDE 10 or equivalent, or a high school GPA of 3.0 or higher if less than 6 years since graduation.

Course Description

Focuses on biological processes with a chemical foundation, including macromolecules, cellular structure, metabolism, and genetics in an evolutionary context. Explores the core concepts of evolution; structure and function; information flow, storage and exchange; pathways and transformations of energy and matter; and systems biology. Emphasizes the process of science, interdisciplinary approach, and relevance of biology to society. Part I of a two-course sequence. Assignments require college-level reading fluency, coherent written communication, and basic mathematical skills. This is a Passport Transfer course. Lecture 3 hours. Recitation and laboratory 3 hours. Total 6 hours per week. 4 credits

Required Materials

Textbooks:

Campbell Biology in Focus. Urry, Cain, Wasserman, Minorsky & Reece. 3rd Edition. Pearson Publishing. ISBN: 9780135686027

Virginia Western Community College Biology 101 Lab Manual. Fall 2022

Course Outcomes

At the completion of this course, the student should be able to:

- Describe the main themes in the study of life
- Explain the chemistry of life, including basic structure and properties of biological macromolecules
- Describe the structures within and surrounding the cell, giving their function
- Explain the cellular processes of cell respiration and photosynthesis
- Explain the processes of mitosis and meiosis
- Describe Mendel's laws and some of their variation
- Discuss some of the phenomena explained by the chromosomal basis of inheritance
- Describe the discovery and some of the properties of DNA
- Explain how a gene may ultimately produce a protein
- Understand the structure, function, and major classification of prokaryotes
- Be familiar with evolutionary trends of protists and fungi

Topical Description

Chapter 1: Introduction: Evolution and the Foundations of Biology

- Unifying themes in biology
- Evolution accounts for the unity and diversity of life
- The process of science

Chapter 2: The Chemical Context of Life

- Elements, Atoms, and Compounds
- Chemical Bonds
- Water's Life Supporting Properties
- Acids and bases

Chapter 3: Carbon and the Molecular Diversity of Life

- Introduction to Organic Compounds
- Carbohydrates
- Lipids
- Proteins
- Nucleic Acids
- How genomics and proteomics have changed biological inquiry

Chapter 4: A Tour of the Cell

- Cell theory
- Microscopy
- Comparing Prokaryotes and Eukaryotes
- Eukaryotic organelles

Chapter 5: Membrane Transport and Cell Signaling

- Membrane Structure and Function
- Transport across membranes
- Osmosis
- Active transport across membranes
- Local and Long distance signaling
- Receptors
- Signal Transduction

Chapter 6: Metabolism

- Thermodynamics
- ATP cycle
- Enzymes
- Regulation of enzyme activity

Chapter 7: Cellular Respiration and Fermentation

- Redox reactions
- Glycolysis
- Pyruvate oxidation and the Krebs cycle
- Electron transport and chemiosmosis

- Fermentation and anaerobic respiration
- Additional metabolic pathways

Chapter 8: Photosynthesis

- Autotrophs and chloroplast structure
- Photosynthesis as a redox reaction
- Chlorophyll, light absorption, and photosynthesis
- Light-dependent reactions
- Calvin cycle
- Photorespiration and alternative methods of carbon fixation

Chapter 9: The Cell Cycle

- Eukaryotic chromosomes
- Cell Cycle
- Mitosis
- Binary fission
- Control of the cell cycle

Chapter 10: Meiosis and Sexual Life Cycles

- Sexual vs. asexual reproduction
- Chromosomes and alternating sexual life cycles
- Process of meiosis
- Meiosis vs. mitosis

Chapter 11: Mendel and the Gene Idea

- Principle of gene segregation
- Monohybrid and dihybrid crosses
- Extensions to Mendel's Laws
- Pedigree Analysis and common genetic disorders

Chapter 12: The Chromosomal Basis of Inheritance

- Sex chromosomes
- Linked genes
- Human chromosomal genetic disorders

Chapter 13: The Molecular Basis of Inheritance

- Discovery of DNA
- DNA Structure
- DNA replication
- DNA and genetic engineering

Chapter 14: Gene Expression: From Gene to Protein

- Central Dogma
- Genetic code
- Transcription
- Translation

- Protein synthesis in prokaryotes vs. eukaryotes
- Mutations

Chapter 15: Control of Gene Expression

- Prokaryotic regulation: Lac operon, Trp Operon
- Eukaryotic regulation
- Chromatin structure
- Posttranscriptional regulation
- Role of noncoding RNA in controlling gene expression

Chapter 17: Viruses

- Viral structure and genomes
- Viral replication
- Emerging viruses
- Prions

Chapter 19: Descent with Modification

- The development of the theory of evolution
- Descent with modification
- Evidence for natural selection
- Convergent evolution

Chapter 21: The Evolution of Populations

- Genetic variation within populations and formation of new alleles
- Hardy-Weinberg equation
- How natural selection, genetic drift, and gene flow affect allele frequencies
- Mechanisms of natural selection and why natural selection is not perfect

Chapter 24: Early Life and the Diversification of Prokaryotes

- Appearance of early life on Earth
- Prokaryotic structure and metabolism
- Prokaryotic reproduction
- Prokaryotic diversity
- Beneficial prokaryotes
- Human bacterial diseases

Chapter 25: The Origin and Diversification of Eukaryotes

- Endosymbiotic theory
- Origins of multicellularity
- Classification and diversity of Protists
- Protist ecology and effects on human health

Chapter 26: The Colonization of Land

Origin, adaptations and diversification of fungi (26.2)

Laboratory Topics

- Scientific Method
- Microscope and Measurements
- Biological Molecules
- Diffusion and Osmosis
- Enzymes
- DNA Technology
- Mitosis and Cancer
- Meiosis and Genetics
- Cellular Respiration
- Photosynthesis/Chromatography
- Protist and Fungal Diversity

Notes to Instructors

- 1. Departmental policy dictates that instructors do not allow students to keep tests.
- 2. A comprehensive final exam counting 15%-20% of the total grade will be given at the end of the semester.
- 3. The syllabus should state what the course grade will be based on, such as tests, quizzes, a comprehensive final exam, and any other assignments made by the instructor.
- 4. The VWCC Biology Department uses a 10-point grading scale.
- 5. Comprehensive study of the listed topics is beyond the reasonable expectations of a 15-week Biology 101 course. It is up to the discretion of the instructor to choose which topics are more detailed but each topic should be adequately covered.
- 6. Additional topics may be covered at the instructor's discretion.
